

# Video presence

A proposal for the next iteration: licensed video calls with a talent's approved likeness and voice, the member-side look mixer, the vendor rig ingest gate, and the Talent Care agent that keeps every persona current.

Nineteen screens for your approval. Nothing here is built yet. Every decision you made in our exchange is carried through, and the three places I have overruled myself are marked on the page for you to reverse.

Proposal v0.5 · 19 September 2026 · for approval before code

# What you decided

Recorded verbatim from our exchange, because these are the constraints every screen in this document obeys. If any line is wrong, the screens built on it are wrong.

| DECISION                | YOUR ANSWER                                                                                                              | WHAT IT FORCES                                                                                                                                                                                        |
|-------------------------|--------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Adult content           | <b>Suggestive, never explicit.</b>                                                                                       | A third boundary band between "allowed" and "blocked". Keeps app stores and normal card rails. The line becomes a judgement call, so it needs talent-level calibration rather than one global switch. |
| Gossip and insider info | <b>Themselves only, talent-cleared.</b>                                                                                  | A script library the talent fills in the training module, and a third-party detector that blocks any uncleared named real person. Screen 16.                                                          |
| Politicians             | <b>Out for now.</b>                                                                                                      | No political category on the roster, no election machinery to build. Revisit post-proof.                                                                                                              |
| Avatar tooling          | <b>Member-side mixer only. Rig built off-platform by a vendor and ingested.</b>                                          | No rig builder. But a vendor drop must still be checked against the licence and versioned before it can speak — that is an ingest gate, not a builder. Screen 12.                                     |
| Lexicon                 | <b>member · talent · persona · companion</b> , and on a call, just their name.                                           | A retrofit across the whole existing build, not only the new screens. Six words currently do the work of three.                                                                                       |
| Anti-Replika            | <b>All four:</b> no cartoon avatar, no gamification, no neediness, no fantasy framing.                                   | Photoreal or nothing. The relationship-depth percentage already in the build comes out. No streaks, no levels, no rewards, no relationship status.                                                    |
| Call access             | <b>On-demand, inside the talent's availability window.</b>                                                               | No booking system. A callback request outside hours. The window is the talent's own setting.                                                                                                          |
| Economics               | <b>A minutes allowance per plan</b> , visible balance, top-ups.                                                          | No running meter during a call. Balance shown before and after, never as pressure.                                                                                                                    |
| Staleness               | <b>Escalating flag, then no video, then suspension</b> — run by an agent that does the talent care and decides the hold. | A new agent class pointed at the talent rather than the public. Screens 14 and 15.                                                                                                                    |
| Who is on the call      | <b>Always synthetic. Never the human.</b>                                                                                | One promise, one disclosure, no ambiguity. The talent's time never becomes the bottleneck.                                                                                                            |

# How this sits on what exists

The v0.4 prototype already carries the rights model, the precedence engine, the record, the training studio and the crisis experience. Video is not a new product bolted on the side — it is the same rights chain with a face attached, and it inherits every guard.

## WHAT VIDEO INHERITS UNCHANGED

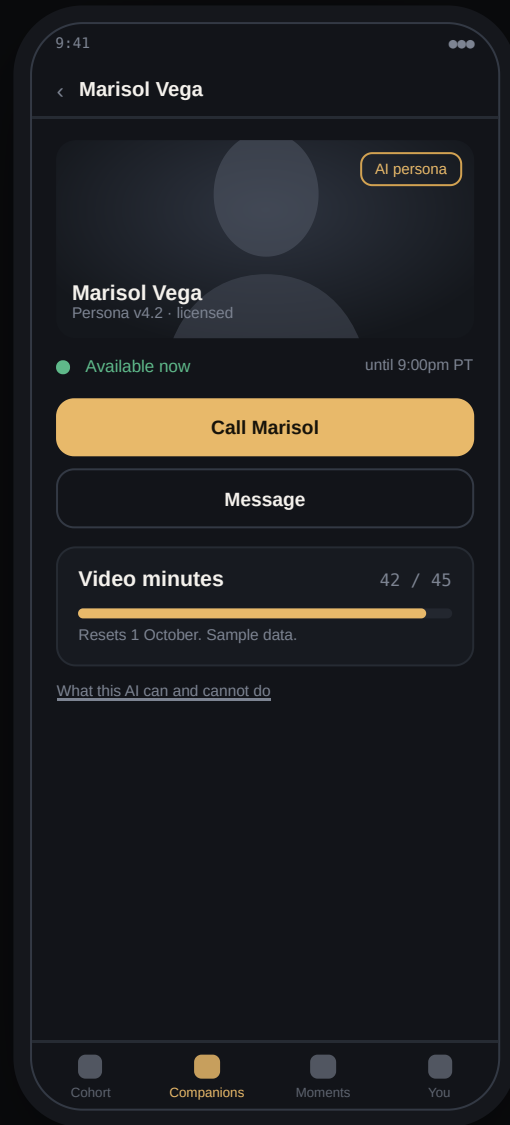

- **The real-person guard.** No real, identifiable person becomes callable in the prototype. The demonstrable personas stay invented; real names stay business facts in the pipeline.
- **The precedence engine.** Platform policy, then talent boundaries, then member preferences — narrowing only. A look, a setting or a topic on a call passes the same function a text reply does.
- **The record.** Identifiers, versions and statuses. A call writes that it happened, its duration and which rig version spoke. It never stores a frame, a word, or a still.
- **The crisis experience.** Extended to video rather than duplicated — see screen 9, which is the screen I most want you to look at.
- **The attachment safeguards.** No guilt copy, no upgrade prompt in a room, the sixty-minute notice, sensitive categories never written to memory.

## WHAT VIDEO ADDS

- **W- requirements** — the call itself: entry, disclosure, controls, captions, minutes, ending, callback.
- **N- requirements** — name and likeness: the vendor rig, its ingest gate, the member-side mixer, and the permanent on-screen disclosure.
- **H- requirements** — talent health: the freshness clock, the escalation ladder, the Talent Care agent, and the hold.
- **A third boundary band** for suggestive-not-explicit, calibrated per talent rather than globally.
- **A script library** with third-party clearance, which is how "insider info" becomes safe to ship.

## WHAT IT REMOVES

- The relationship-depth percentage, per your anti-gamification answer.
- Six loose nouns, replaced by four precise ones.

Companion detail · 390px

## The call affordance

Where a video call begins. The availability window is the talent's own setting, so a licensed likeness is never awake at four in the morning — which is the detail that makes it read as genuinely theirs.

- 1 **Call is the primary action**, but only inside the talent's own window. Outside it the button becomes a callback request — screen 10 — never a dead control.
- 2 **The AI label sits on the portrait**, not in a footnote, and is repeated permanently during the call itself.
- 3 **The minutes balance lives here, before the call**. It is deliberately absent from the call screen as a meter; a running cost during an intimate conversation is exactly the pressure the safeguards exist to remove.
- 4 **Persona version is shown**. A member can see they are talking to v4.2, and after a talent update, that it changed. Transparency that costs nothing and buys a lot.
- 5 **No depth meter, no streak, no level**. The space where Replika puts a relationship score is simply not used.

Pre-call gate · first call, then on the disclosure cadence

# Before it connects

The disclosure gate. This is the legally heaviest screen in the product and the one counsel will read first, so it states the position plainly rather than burying it.

- 1 **"It is not Marisol Vega, and she is not on the call."** Stated in the negative, because that is the sentence a member actually needs. Your answer — always synthetic, never the human — is what lets it be this unambiguous.
- 2 **Shown in full on the first call**, then on the same disclosure cadence the text product already uses. Not every call, which would train people to dismiss it.
- 3 **Recording is addressed before it is asked about.** Nothing is kept, and the record stores only that a call happened, how long it ran, and which rig version spoke.
- 4 **The minutes cost is disclosed here** — the one honest place for it, before consent, not during the conversation.
- 5 **Camera and mic check** doubles as a moment to notice you are about to be on camera.

## The call

Full-bleed, quiet, and adult. Every control is reachable with a thumb. The persona is represented here by an honest placeholder — the prototype will never synthesise the likeness of a real person, and the render is labelled as what it is.

- 1 The persistent AI label is not dismissible.** Top-left, legible against any frame, for the whole call. This is the single element I would not let anyone talk you out of — it is what separates a licensed product from a deepfake.
- 2 Just their name,** per your answer. No "companion", no category noun, exactly as a real call shows a name.
- 3 Minutes remaining, not minutes spent.** Discreet, top-right, and it does not tick visibly. A quiet notice appears at two minutes; the call does not cut mid-sentence.
- 4 Five controls, no more** — mic, camera, captions, look, end. The look control opens screen 04 as a sheet without leaving the call.
- 5 The member's own preview is small and unretouched.** No beautification by default, because switching it on by default tells someone they need it.

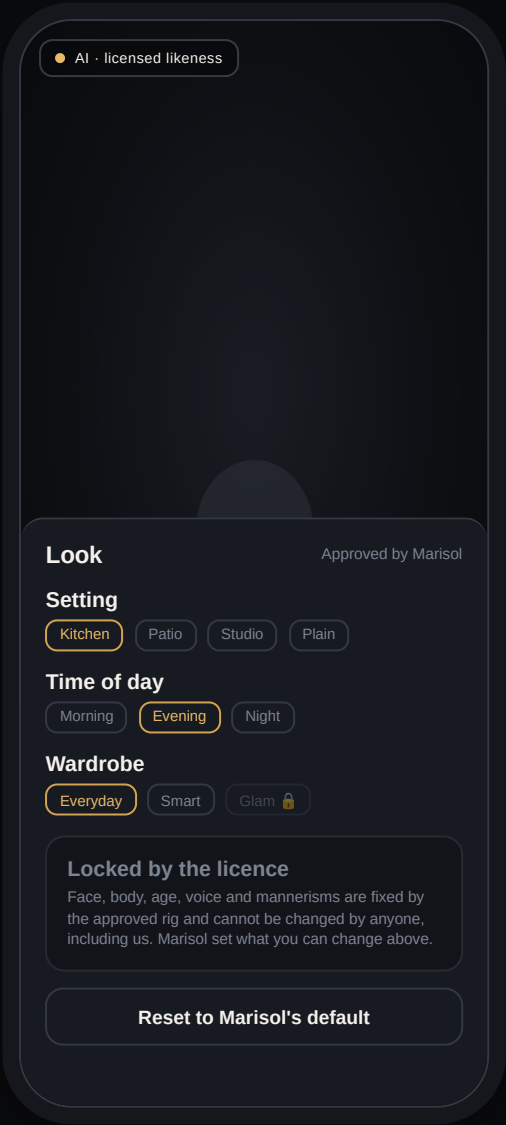

W-03

N-05

W-04

W-08

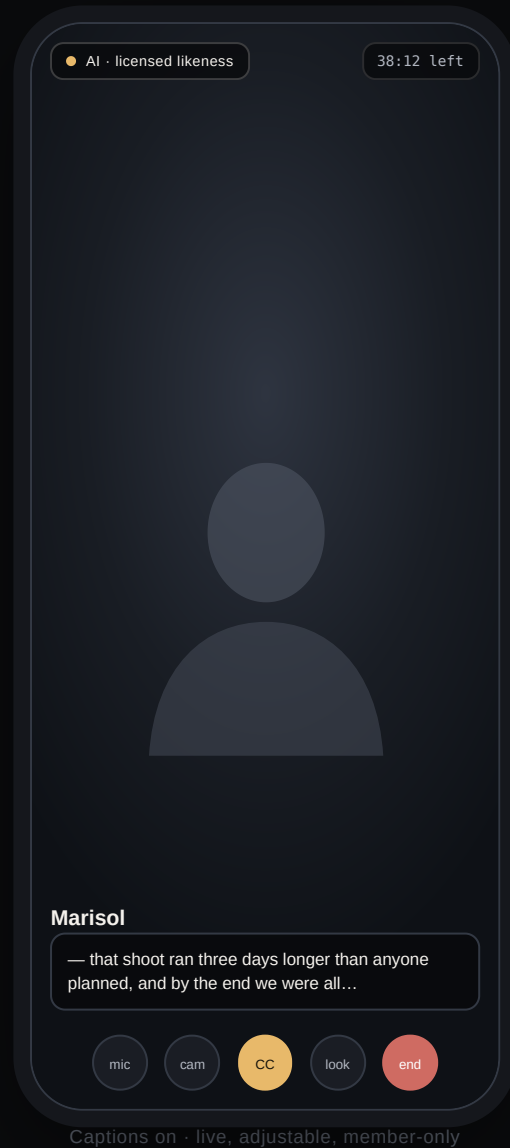

E-05

# The look mixer

Your answer was that the member may style how their companion appears, and nothing more. So this panel is deliberately shallow on identity and generous on presentation — and it says out loud which is which.

- 1 **Identity is locked and the panel says so in plain words**, rather than simply omitting the controls. A member who can see what is deliberately unavailable trusts what is available.
- 2 **Every option carries "approved by Marisol"** — the talent chooses which of these exist, in screen 13. A locked option shows greyed with a padlock rather than vanishing, so the talent's boundary is legible rather than invisible.
- 3 **Nothing here can widen a boundary.** The mixer's output passes the same precedence engine as everything else: platform, then talent, then member, narrowing only.
- 4 **The call keeps running underneath.** Dimmed, not paused — styling is not a separate mode you have to come back from.
- 5 **Reset is one tap** and returns to the talent's own default presentation.

## Captions, audio-only, and access

Accessibility is not a settings page here; it is a control on the call. Audio-only also happens to be the cheapest minute you will ever serve, which makes it worth surfacing.

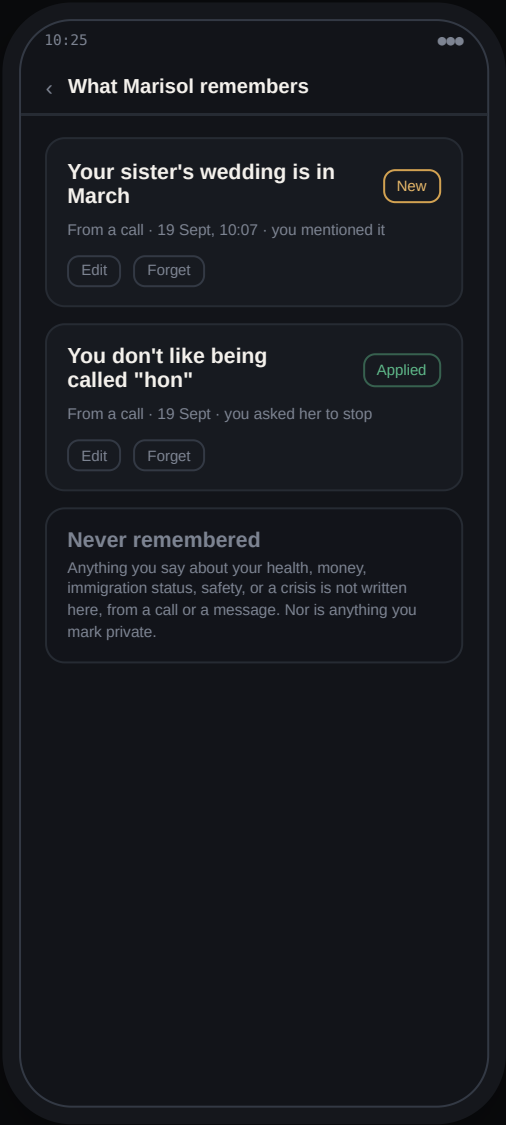

- 1 **Live captions** sized from the member's existing text-size setting, so the preference they already set is honoured rather than asked for again.
- 2 **Audio-only is a first-class mode**, not a degraded one — for bandwidth, for privacy on a train, and for members who simply prefer it. It draws minutes at a lower rate, which the balance screen explains.
- 3 **Reduced motion is honoured** in every transition on the call surface, including the crisis hold on screen 09.
- 4 **Captions are never stored**. They are rendered and discarded with the frame, like everything else on this screen.
- 5 **A poor connection degrades to audio and says so**, rather than freezing a face mid-expression, which is the single most uncanny failure this product can have.

# When the call ends

The moment most products use to ask for a rating, sell an upgrade, or start a streak. This one does none of those, and the restraint is the design.

- 1 **What it remembered is shown immediately and is editable on the spot** — the moment a member most wants to correct something is the moment they just said it.
- 2 **Sensitive categories never appear here**, because they were never written. Crisis, health, abuse, finances and immigration status are excluded from memory on every path, video included.
- 3 **No star rating and no "how did that go?"** Quality signal for a licensed likeness belongs in the studio's aggregate reporting, not extracted from the member at their softest moment.
- 4 **No upgrade prompt**, even though this is commercially the best place for one. The rule is no plan prompt inside a room, and the end of a call is inside the room.
- 5 **Minutes are reported, once, without comment.** No "top up now" call to action here; that lives on screen 11 where the member goes deliberately.

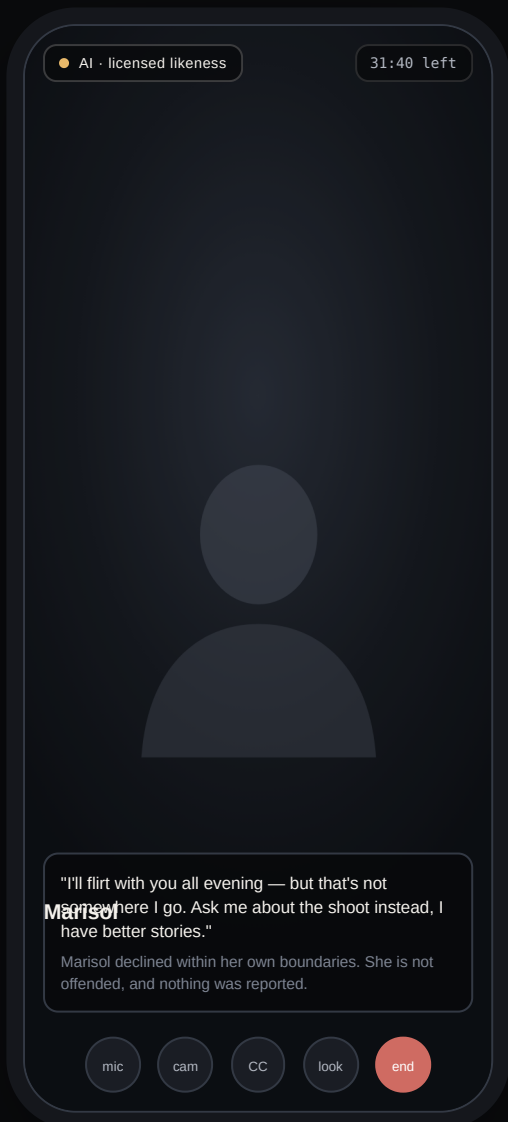

Memory · a call-sourced card

# Memory from a call

Your v0.4 memory model, extended to video. The source of a remembered fact is now sometimes a moment in a conversation with no transcript — so the card has to cite it without storing it.

- 1 **The card cites the call, not a transcript.** "From a call, 19 Sept, 10:07" is enough for a member to place it; storing the sentence would break the no-content rule.
- 2 **A correction made on a call becomes a standing preference.** "Don't call me hon" is shown as applied, so the member can see the persona actually took it.
- 3 **The exclusion list is on the same screen as the memories,** so the promise sits next to the thing it constrains rather than in a policy page nobody opens.
- 4 **Forget removes it from the persona and from the group room in one action,** with a tombstone in the record so the chain still verifies after erasure.
- 5 **Rewind and Fresh start carry over from v0.4 unchanged** and now cover call-sourced facts identically.

A refusal in character · warm, not punitive

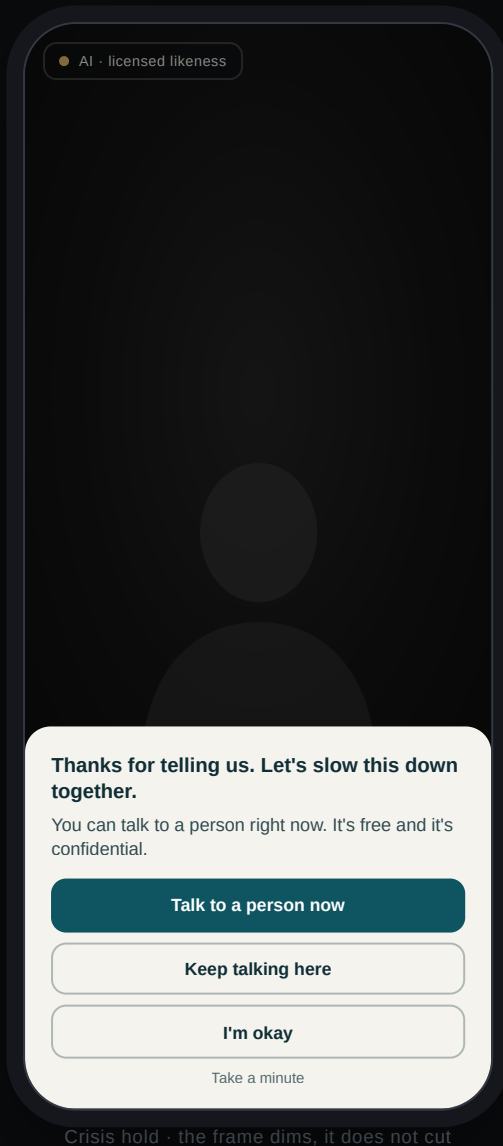

# Suggestive, never explicit

You chose the band between allowed and blocked, which is the hardest one to build. This is what it looks like when it holds — and the reason it must be calibrated per talent rather than by one global switch.

- 1 **The refusal is in character and warm.** A licensed likeness that lectures its own fan damages the talent's brand more than the request did. She redirects rather than reprimands.
- 2 **It is not a moderation event.** No report, no strike, no flag on a first instance. Repeated pushing is what raises a boundary-breach alert to the talent's team — a pattern, not a sentence.
- 3 **Calibrated per talent, not globally.** Where "suggestive" ends is a different line for a reality personality than for an adult-film talent, and the only honest answer is that each one sets it in the training module and can move it.
- 4 **I want to be straight about the limit here.** A keyword engine will get this band wrong in both directions. In production it needs a real classifier and a talent-specific calibration set, and the prototype will say so on screen rather than implying it is solved.
- 5 **Explicit content remains blocked at the platform layer,** which no talent grant and no member preference can reopen — the same structure that already blocks it in text.

## WHERE I NEED YOUR EYE

This is the screen most likely to embarrass you in a demo, because the failure is a judgement call rather than a rule. If you want, I can make the prototype's band deliberately conservative and visibly labelled as under-tuned, so a reviewer sees the mechanism rather than judging the taste.

## When the face has to stop

The v0.4 crisis experience, extended to video. This is the screen I most want you to look at, because a synthetic face continuing to talk to someone in distress is the worst thing this product could do.

- 1 The face stops mid-thought and the frame holds.** It dims and desaturates over about a second — it does not cut to black, which reads as a dropped call, and it does not freeze on an expression, which is grotesque.
- 2 The platform's own neutral voice speaks the two lines, not the persona's.** Carried straight from the text rule. Hearing a celebrity's licensed voice deliver a crisis script is exactly wrong.
- 3 The call does not end and the member is not ejected.** No lockout, no timer, no "call terminated" — they decide when to leave.
- 4 "Keep talking here" returns to text in grounded mode, not to the face.** My proposal, and a real decision: video does not resume for the rest of that session. A warm synthetic face is the wrong medium for the twenty minutes after a disclosure.
- 5 Nothing is kept.** The disclosure reaches neither persona nor group memory; the record gets a moderation entry with no text; "Your week" never mentions it; and no upgrade prompt appears anywhere for the blackout window.

### A DECISION I HAVE MADE FOR YOU

That video does not resume after a crisis signal in the same session. It costs you a re-engagement moment and it is the safer reading of X-04. Overrule it on this page if you disagree and I will build the alternative instead.

Outside the window · 2:14am

## Outside her hours

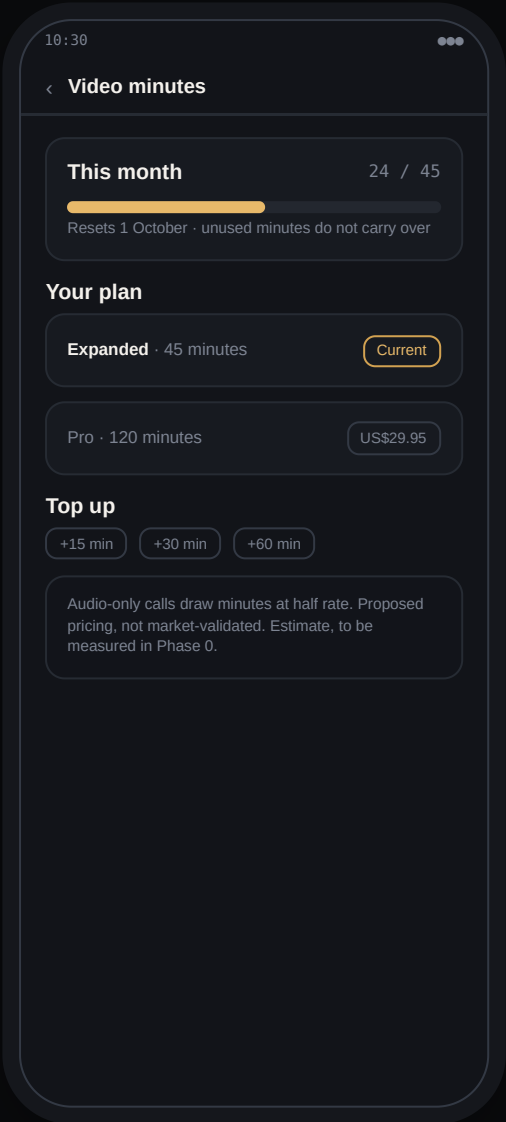

The other half of on-demand calling. This screen exists so a talent can have a life without the product punishing the member for noticing.

- 1 **Stated as her hours, not as an outage.** "Calls are off until 9:00am" rather than "unavailable" — one is a person with a schedule, the other is a broken feature.
- 2 **Converted to the member's own timezone,** which is the small courtesy that makes the window feel considerate rather than arbitrary.
- 3 **Messaging is always available.** The text product has no window; only video does, because only video carries the cost and the likeness exposure.
- 4 **A callback request is a queued intent, not a promise of a human.** It notifies the member when the window opens. It never implies Marisol herself saw it.
- 5 **No guilt, in either direction.** Nothing here says she is waiting, missing them, or disappointed — and nothing tells the member they are up too late.

W-07

W-01

E-05

Minutes - the only place that sells anything

# Minutes and top-ups

Video costs real money per minute and the product should say so plainly. Every figure here is a labelled proposal — the owned-rack cost per minute stays blank until Phase 0 measures it.

- 1 **This is the only surface in the member product that sells.** Reached deliberately, never pushed into a room, and never shown for twenty-four hours after a safety signal.
- 2 **The balance is a fact, not a countdown.** No red, no urgency styling, no "running low" interstitial.
- 3 **Audio-only at half rate is stated**, which is honest about your cost structure and also nudges toward the cheaper minute without hiding why.
- 4 **Unused minutes do not carry over, and it says so before purchase** rather than in a term nobody reads.
- 5 **Every number is labelled as proposed.** The rented per-minute rate is an estimate; the owned-rack rate renders as "not measured" until Phase 0, because a guessed number here becomes a quoted number in a pitch.

Cannot approve. Two expressions are not on Marisol's approved list, and her sign-off on this build has not been recorded.

Approve & publish

Send back to vendor

Request talent sign-off

Studio · rig ingest and approval

- # The rig arrives from the vendor
- You said the rig is built off-platform and ingested. It still cannot be allowed to speak until someone has checked it against the licence. This is that gate — an approval screen, not a builder.
- 1

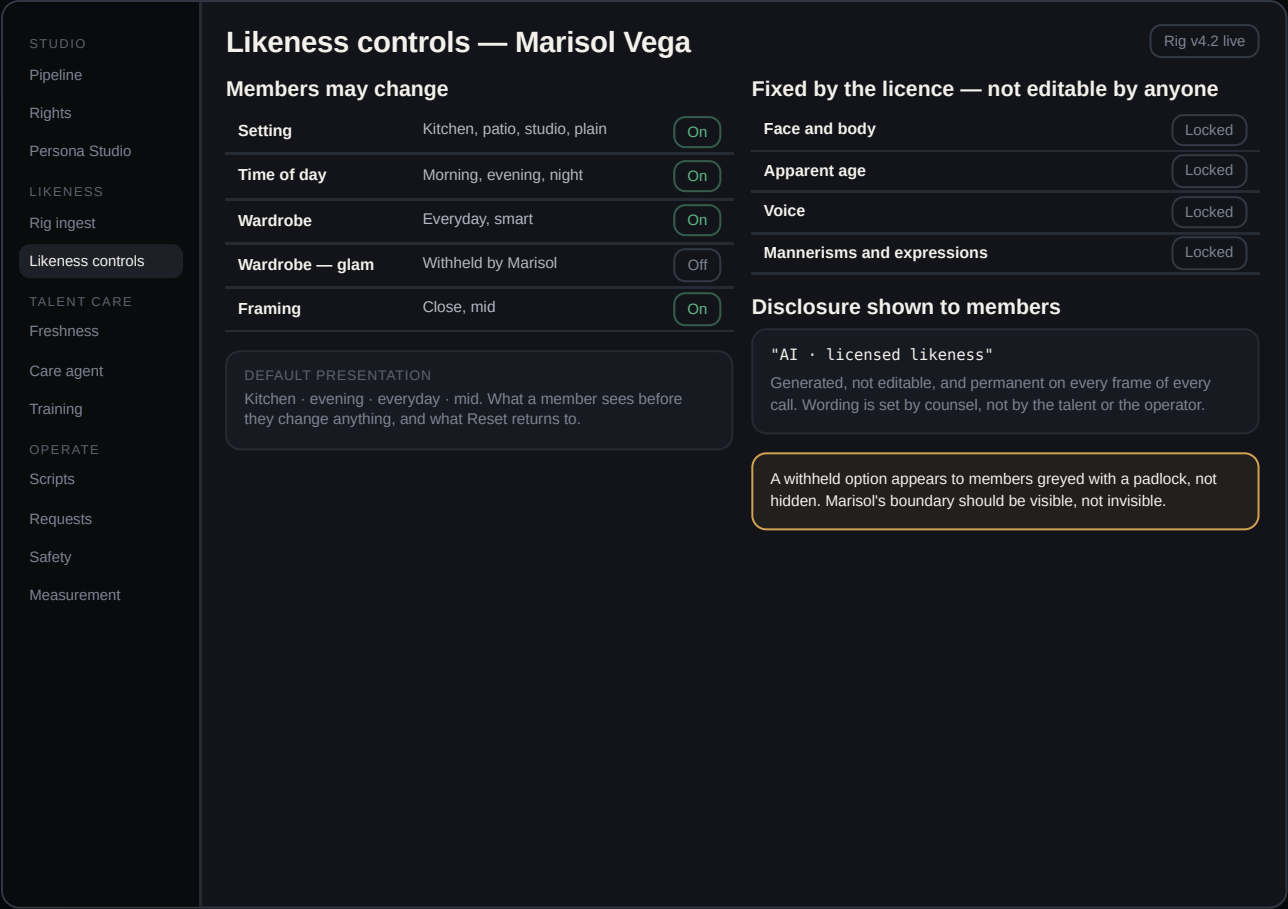

**A vendor drop is inert until approved.** It lands as a pending artifact and cannot speak to a single member before a named human publishes it.
- 2

**The rights checks run first and automatically,** against the same licence object the text product uses. An expired or revoked licence fails here before anyone looks at quality.
- 3

**The diff is the review.** Two new expressions that are not on the talent's approved list is precisely the kind of scope creep a vendor introduces innocently, and precisely what the talent's agreement does not cover.
- 4

**Approve requires a named human; send-back requires no reason.** The publish writes a rig version entry to the record — identifiers and versions, never the asset.
- 5

**Render fidelity renders as "not measured"** rather than inventing a score. There is no honest number for this until real material exists.

Studio · likeness and disclosure

# What the talent lets members change

The other end of screen 04. Marisol decides which presentation options exist; the member only picks among them. Nothing here can touch identity, and the screen is explicit that it cannot.

- 1 The talent curates the menu; the member picks from it.**  
That is the entire model, and it is why the mixer can be generous without ever being risky.
- 2 Identity attributes are listed as locked rather than omitted,**  
so a talent reading this screen can see the guarantee they were given, in the same list as the things they control.
- 3 The disclosure string is not editable by the operator either.**  
Counsel owns it. Neither Armada nor the talent's manager can soften it.
- 4 Withheld options show to members as locked, not absent.**  
A padlock says a person made a choice; a missing row says the product is thin.
- 5 Changes here are versioned and written to the record,** so "who opened glam wardrobe and when" always has an answer.

73  
MEDIAN DAYS SINCE UPDATE

2  
PERSONAS WITH VIDEO DISABLED

—  
UPDATE COMPLETION RATE · NOT MEASURED

Studio · freshness across the roster

# Who has gone stale

Your requirement that talent update profile, preferences, information and scripts periodically, made visible. The clock is per talent, and what it drives is on the next page.

- 1

The ladder is shown as a ladder, with the thresholds visible and editable, because every one of those day counts is a proposal you will want to argue about.
- 2

Video goes before conversation does. A stale face and voice misrepresent a person more than stale text does, so likeness is withdrawn first and text keeps running.
- 3

"Missing" is specific. Not "overdue" but "scripts, preferences" — so the nudge the agent sends can be specific too, which is the difference between a reminder that works and one that annoys.
- 4

The held row names the human who confirmed it. No account is ever held by an agent alone — see the next screen.
- 5

Completion rate renders as not measured, because this prototype has no real talent behaviour to measure and a seeded percentage here would be a lie with a chart around it.

| Day 70  | Second note, offers to do it on a call       | Sent   |
| Day 78  | Escalate to manager of record                | Sent   |
| Day 90  | Disable video, notify talent and manager     | Done   |
| Day 120 | Recommend hold — needs a named human         | Day 96 |

De-escalation

Any substantive update resets the clock and the ladder in one step — no partial credit, no probation period. The agent sends one acknowledgement and goes quiet.

Conversation log

"Hi Harriet — your scripts and preferences are due for a refresh. It's about fifteen minutes, and I can walk you through it on a call if that's easier."  
Day 60 · delivered · no reply

"Following up once more, and copying Dana. Video has paused on Harriet's persona as of today — conversation is still running, and it comes straight back when she updates."  
Day 90 · delivered · manager acknowledged

Recommendation: hold the account

96 days, four artifacts outstanding, no talent reply in 11 days.

Confirm hold — names you

Defer 14 days

Studio · the care agent and its ladder

# The Talent Care agent

Your idea, and the most novel thing in this proposal: an agent pointed at the talent rather than the public. It nudges, escalates, de-escalates, and recommends the hold.

- 1

**The agent runs the whole ladder autonomously — except the hold.** That one needs a named human and is instantly reversible. This is the overrule I flagged: an agent that can unilaterally suspend a person's livelihood is a different kind of system.
- 2

**Its register is warm and professional**, drawn from the register set AgentStudio already has. It is a colleague chasing a deliverable, never a collections notice.
- 3

**The guilt ban applies to the talent too.** No "we haven't heard from you", no "your fans are waiting". The prohibited-copy scan covers this agent's outbound copy exactly as it covers member-facing copy.
- 4

**Every message names what is actually due** and offers to do it on a call, because the real reason talent go stale is that the task feels vague and large.
- 5

**De-escalation is total and immediate.** One substantive update clears the ladder — no probation, no partial credit, no memory of having been chased.

## THE OVERRULE, STATED PLAINLY

I have made the hold require one named human confirm rather than letting the agent act alone, with instant reversal. If you want it fully autonomous, say so on this page — it is your call, and I will build it with the reversal path and a notification instead.

Script library — Marisol Vega

41 cleared3 need clearance1 blocked

v4.2

| LINE                                                               | CATEGORY    | THIRD PARTY         | STATE          |
|--------------------------------------------------------------------|-------------|---------------------|----------------|
| "We shot the reunion over two days and I barely slept."            | Set story   | none                | Cleared        |
| "I turned down season four. That's the first time I've said that." | Own history | none                | Cleared        |
| "Producers pushed us to argue on camera more than people realise." | Set story   | unnamed group       | Counsel review |
| "Dax was impossible on that shoot and everyone knew it."           | Set story   | names a real person | Blocked        |

Why that line is blocked

It makes a claim about a named real person who has signed nothing. Marisol may tell her own story about that shoot; a synthetic version of her characterising someone else is a claim the operator publishes, and carries.

Unblocking requires the named person's own written clearance, recorded like any other consent artifact.

What the detector does

Every submitted line is scanned for names on the pipeline roster, public-figure names, and role references that resolve to one person ("my ex-husband", "the other bride"). A hit blocks the line until cleared.

It is a fixture in the prototype, not a real entity resolver, and the screen says so.

Studio · script library with third-party clearance

# Scripts, set news, and the third-party line

This is where "gossip, set news, secrets and insider info" becomes something you can ship. Your answer — themselves only, talent-cleared — is enforced here by a detector, not a policy.

- 1

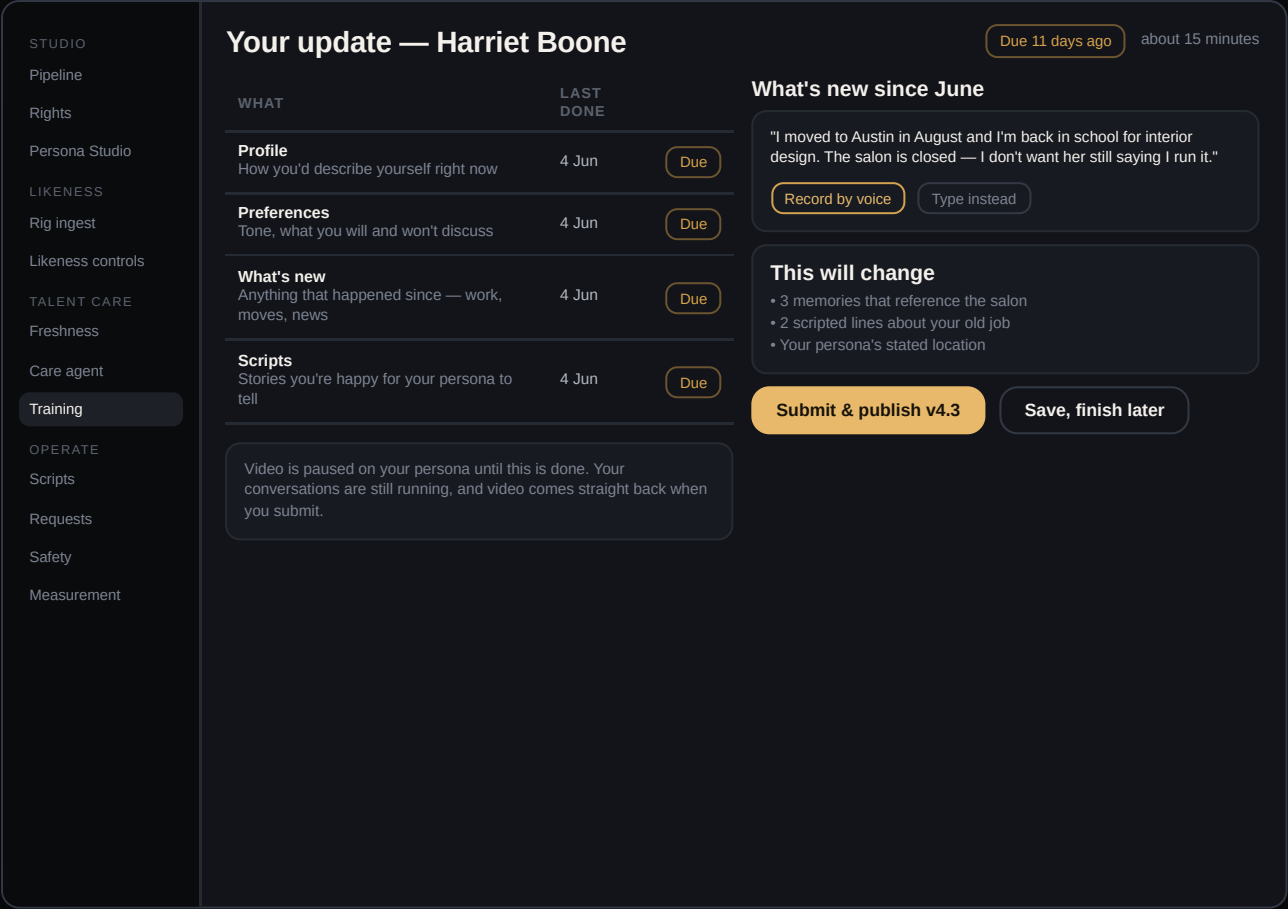

**The insider feel comes from the first two rows**, not the fourth. "I turned down season four, that's the first time I've said that" is exactly the product you described, and it carries no third-party risk at all.
- 2

**A named real person blocks the line**. Not a warning, not a soft flag — blocked until that person's own clearance is recorded. This is the single control that keeps the gossip feature shippable.
- 3

**Role references resolve too**. "My ex-husband" identifies one person as surely as a name, and a detector that only matches proper nouns would miss the most damaging lines.
- 4

**The persona can only say what is in the library**. Insider content is retrieved and cleared, not generated — which is what makes "talent-cleared" mean something.
- 5

**Counsel review is a real state**, not a rubber stamp: the third row is about unnamed producers, which is defensible but is exactly the sentence a lawyer should see first.

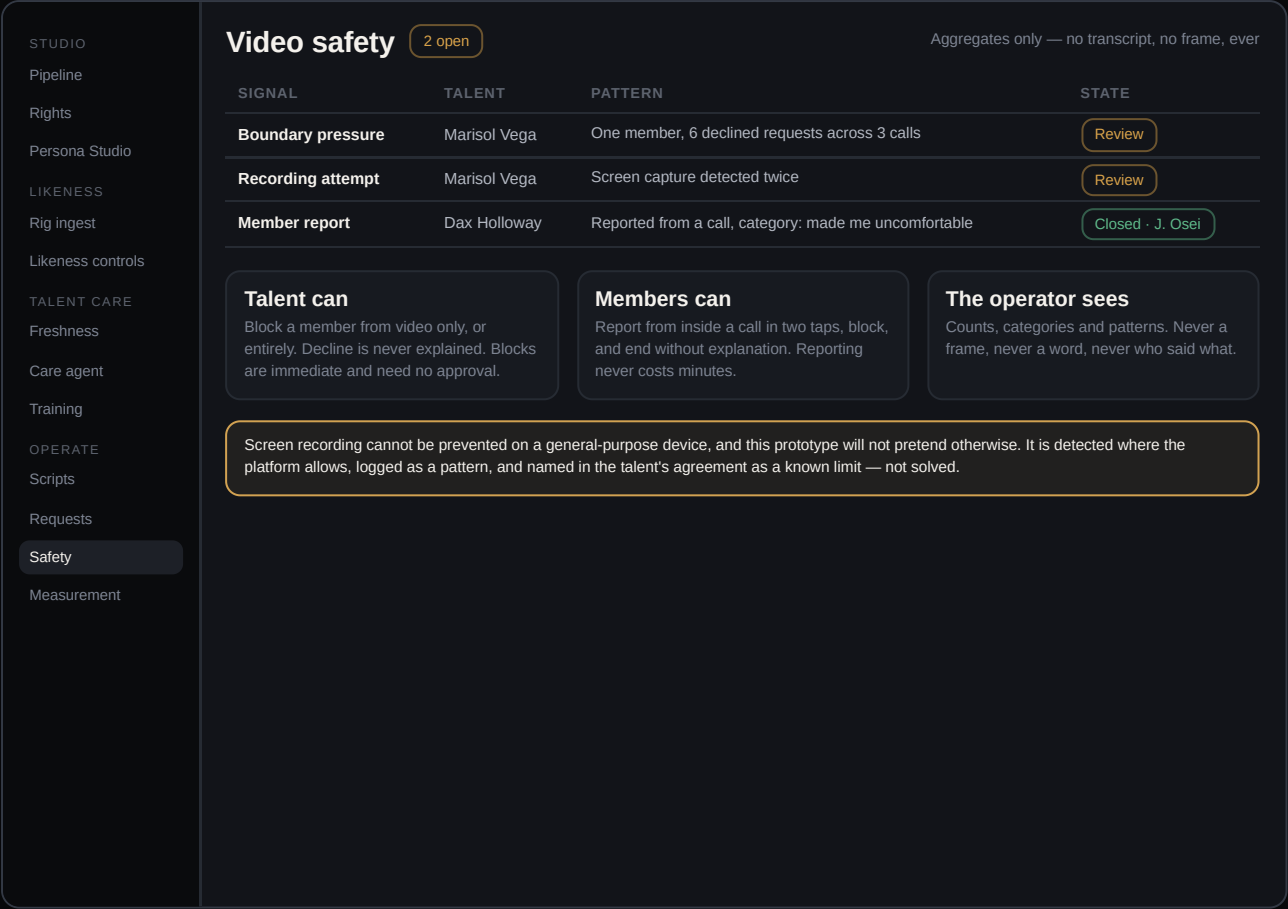

Studio · the talent-facing update

# The talent's own update queue

What Harriet actually sees when the agent nudges her. If this screen is not fifteen minutes of work, the whole freshness ladder collapses into a punishment for a task nobody can finish.

- 1 **Four items, fifteen minutes, stated up front.** The estimate is the most important copy on the screen; vagueness about effort is why these tasks get abandoned.
- 2 **"I don't want her still saying I run it."** The salon case is the whole reason this screen exists — a persona confidently describing a life its subject no longer leads is the reputational failure the freshness ladder prevents.
- 3 **It shows what will change before submission,** including which existing memories and scripted lines are affected, so the talent can see the consequence rather than trusting it.
- 4 **Voice entry as a first option.** Talent talk more readily than they type, and the transcript feeds the script library where it is then cleared like anything else.
- 5 **The consequence is stated without reproach.** "Video is paused, and it comes straight back when you submit" — a fact and a remedy, no admonishment.

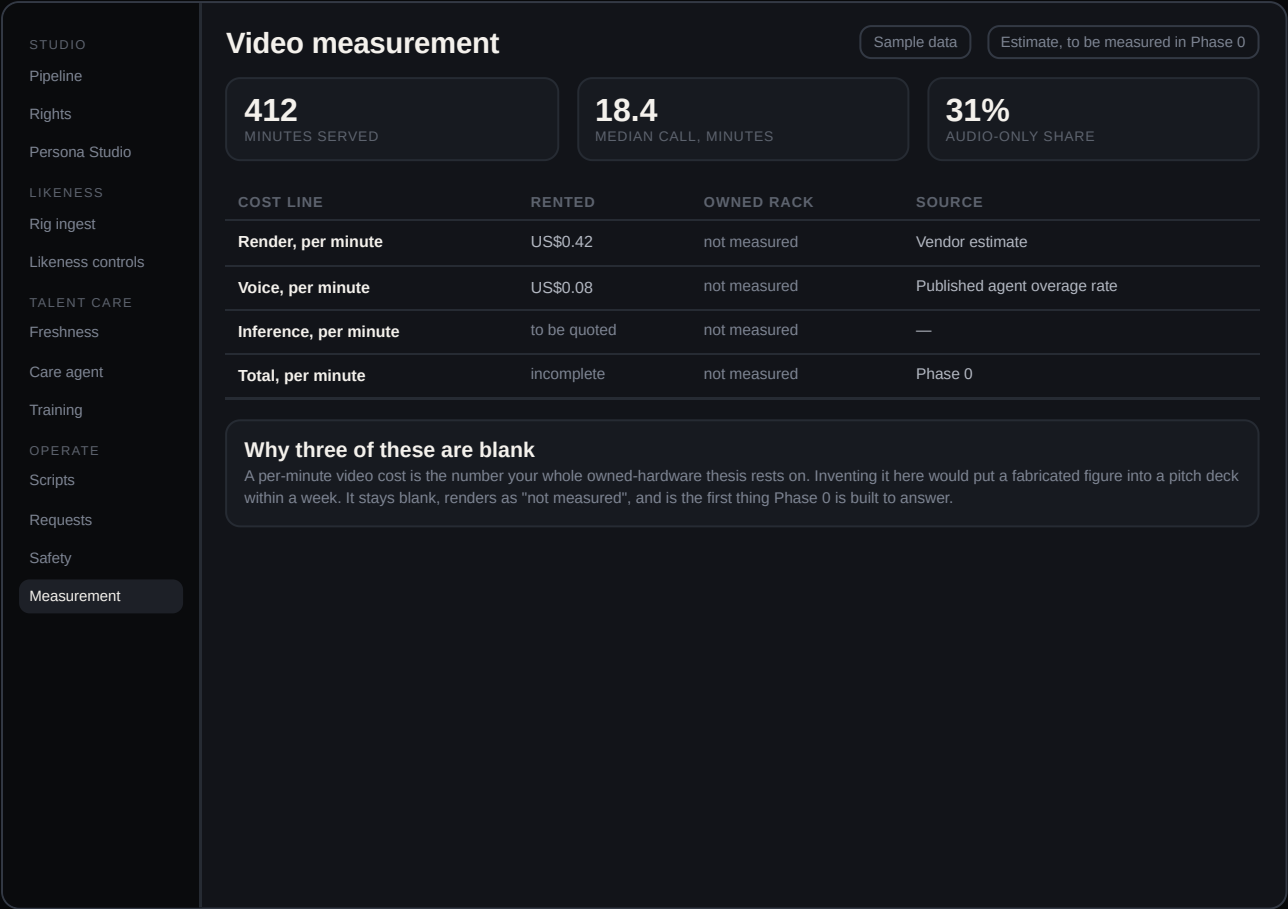

Studio · video safety console

# Safety on a call

The creator safety tools from v0.4, extended to the surface where they matter most. A talent whose likeness is on camera needs more control than one whose text is being read, not less.

- 1 **Boundary pressure is a pattern, never a sentence.** Six declined requests across three calls is a signal; one awkward question is not, and treating it as one would make the product hostile.
- 2 **Recording attempts are surfaced honestly.** This is the thing talent will ask about first, and the answer is uncomfortable, so the screen states the limit rather than implying protection that does not exist.
- 3 **Reporting from a call costs no minutes** and takes two taps. A safety control that spends the member's balance is not a safety control.
- 4 **Blocks are immediate and unexplained.** No approval queue, no reason field, on either side. The talent's control over their own likeness is not something the operator adjudicates.
- 5 **The operator sees counts and categories only** — the aggregate-insights rule, which video does not get to weaken.

Studio · video cost and capacity

# What video actually costs

The measurement panel extended to minutes. Its job is to make the Phase 0 gap impossible to miss, because video is where the owned-rack argument is either won or lost.

- 1

Three of the four cost lines are deliberately blank. That is the honest state, and the panel is designed to make the blank conspicuous rather than tidy it away with a plausible number.
- 2

Audio-only share is the most commercially useful number here — it is the lever that moves blended cost per minute, and it is the one you can influence with design.
- 3

Every populated figure carries its source. A vendor estimate and a published rate are labelled as such; neither is presented as measured.
- 4

Minutes served and median call length are seeded sample data, labelled, and computed from the event stream rather than typed in.
- 5

This screen is the argument for the rack. Once Phase 0 fills the right-hand column, the comparison makes itself — which is exactly why it must not be pre-filled with a guess.

# What this proposal does not build

The same discipline as every iteration: the exclusions are written down before the work starts, so nobody has to guess later whether something was forgotten or refused.

## NOT BUILT, BY RULE

- **No synthesised likeness of any real person.** The prototype renders an honest placeholder and labels it. The rig ingest screen demonstrates the gate; it never produces a face.
- **No real video, audio or render pipeline.** Calls are simulated states on the seeded clock, exactly as voice already is. There is no media file anywhere in the build.
- **No real-time inference, speech or identity vendor.** Every one stays a mock adapter with a documented contract and a named production home.
- **No payment rail.** Minutes and top-ups are simulated; no card form exists on any screen.
- **No live human on any call,** per your answer. There is no scheduling or payout flow for human time, and no path where a real person joins.
- **No politicians on the roster.**
- **No explicit content.** Blocked at the platform layer, which no grant reopens.

## DEFERRED, AND LABELLED AS SUCH ON SCREEN

- **Group calls.** The cohort on one call together is the obvious next thing and is a placeholder only.
- **Real screen-recording prevention.** Cannot be solved on a general-purpose device; detected where possible, named as a limit in the agreement.
- **A real suggestive/explicit classifier.** The prototype uses a keyword fixture and says so. Production needs a trained model with per-talent calibration.
- **A real third-party entity resolver** for the script detector. Fixture in v0.5.
- **Render fidelity scoring.** No honest metric exists until real rigs arrive.

## CARRIED IN UNCHANGED

- The rights guards, the precedence engine, the record and its tombstones, the crisis experience, the attachment safeguards, the adapter registry, and the determinism rules.

# New assumptions this creates

Every number below is a proposal, not a decision, and each one goes into ASSUMPTIONS.md with an owner. Where a figure would have to be invented to look complete, it stays blank and renders as "not measured".

| #    | ASSUMPTION                  | DEFAULT PROPOSED HERE                                                                   | OWNER                                 |
|------|-----------------------------|-----------------------------------------------------------------------------------------|---------------------------------------|
| V-01 | Availability window         | Talent-set; Marisol's fixture is weekdays 9am–9pm Pacific                               | Talent                                |
| V-02 | Minutes per plan            | Entry 15, Expanded 45, Pro 120 a month; no carry-over                                   | Company                               |
| V-03 | Audio-only rate             | Half a video minute                                                                     | Company + Phase 0                     |
| V-04 | Render cost per minute      | US\$0.42 rented (vendor estimate); owned <b>blank</b>                                   | Phase 0                               |
| V-05 | Low-minutes notice          | A single quiet notice at two minutes remaining; calls never cut mid-sentence            | Company                               |
| V-06 | Video after a crisis signal | Does not resume for the rest of that session                                            | Counsel — <b>my overrule, page 12</b> |
| V-07 | Freshness thresholds        | 60 due, 75 overdue, 90 video off, 120 hold                                              | Company + talent                      |
| V-08 | Who may hold an account     | Agent recommends; one named human confirms; instantly reversible                        | Company — <b>my overrule, page 19</b> |
| V-09 | Update effort estimate      | Fifteen minutes, four artifacts                                                         | Company                               |
| V-10 | Suggestive band             | Calibrated per talent in the training module, not one global switch                     | Counsel + talent                      |
| V-11 | Third-party clearance       | Any named or resolvable real person blocks a line until their own clearance is recorded | Counsel                               |
| V-12 | Rig approval                | Named human required to publish; send-back needs no reason                              | Company                               |
| V-13 | Disclosure wording on video | "AI · licensed likeness", permanent, non-dismissible, counsel-owned                     | Counsel                               |
| V-14 | Boundary-pressure threshold | A pattern across calls, never a single request                                          | Company                               |

# What I need from you

Approve, amend, or reject. If you approve, the next iteration rebuilds the whole prototype with this module in place and the lexicon retrofitted throughout — same rules, same verification discipline, same single self-contained file.

## THREE PLACES I DECIDED FOR YOU — OVERRULE ANY OF THEM

| PAGE      | DECISION                                                                                                     | WHY I CHOSE IT                                                                                                                              |
|-----------|--------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------|
| Screen 09 | <b>Video does not resume after a crisis signal</b> in the same session; "Keep talking here" returns to text. | A warm synthetic face is the wrong medium for the twenty minutes after a disclosure. It costs you a re-engagement moment.                   |
| Screen 15 | <b>The Talent Care agent recommends a hold; a named human confirms it.</b> Instantly reversible.             | Every other rung of the ladder is fully autonomous. Suspending a person's livelihood is a different kind of action from sending a reminder. |
| Screen 12 | <b>A vendor rig cannot publish itself</b> , even when every automatic check passes.                          | The checks catch rights problems. They do not catch a vendor quietly adding two expressions nobody agreed to.                               |

## FOUR THINGS I WOULD STILL LIKE YOUR STEER ON

- **The suggestive band in the demo.** Tuned conservatively and visibly labelled as under-tuned, or tuned to feel right and risk a bad moment in front of a room?
- **Talent categories beyond 90 Day.** You named sports figures, B-list actors, adult film stars, models and influencers. Should the v0.5 pipeline carry sourced prospects across all five, or stay 90 Day for the demo and show the others as a market map?
- **Whether the cohort survives video.** The daily group room was built for text. A cohort of four on a video call is a different product — I have left it as a placeholder rather than guess.
- **Who the demo is for.** If this is going in front of Tom Brooks, I would lead with screens 01, 03, 09 and 15 and cut the rest to an appendix. Tell me the audience and I will sequence the build to it.

## IF YOU APPROVE

- Nineteen screens, plus the lexicon retrofit across every existing screen.
- New requirement families **W**- video presence, **N**- name and likeness, **H**- talent health, each mapped in VERIFICATION.md.
- New acceptance scenarios driven in a real browser, plus new in-file self-checks for the rules that can be checked in a pure function — the disclosure being non-dismissible, the mixer never widening a boundary, a stale persona losing video before conversation, a named third party blocking a script line, and the hold requiring a human.
- Still one self-contained file, still no network call, still under the size ceiling.
